Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

POLYPEPTIGE OF G-coupled receptor proteins (GPRs) - useful for bolypeptides of G-coupled receptor proteins selected from CAMP, adenosine, muscarinic acetylcholine, proteins verce used to design polypeptides, profeins selected from CAMP, adenosine, muscarinic acetylcholine, corput proteins were used to design polypeptides, pref based on the receptor proteins were used to design polypeptide receptor ligand binding assays. The polypeptide fragments retain biological activity such as Inding a RPR ligand binding to a GPR CS (see R48759-R48758, R50569-R50807) and R89189-R89195 for examples of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects suffering from a pathology related to Sequence 317 AA;
                                                                                                                                                   for treating schizophrenia
Disclosure; Column 49-52; 184pp; English.
Proteins N0265-W07210 represent a range of G-protein coupled receptor (GPR) proteins selected from cAMP, adenosine, muscarinic acetylcholine, adrenegic, thrombin, endothelin, bombesin, endocrine, rhodopsin, opsin, odorant, cytomegaloviral and other GPR proteins. The receptor proteins were used to design polypeptides, pref. based on the transmembrane domains, for use in G-protein coupled receptor ligand blanding assays. The polypeptide fragments retain biological activity such as binding a GPR ligand or modulating GPR ligand binding a compositions for treating subjects suffering from a pathology aused in compositions for treating subjects suffering from a pathology related to a GPR abnormality e.g. a psychotic disorder such as

                                                                                                                                                                                                                                                                                                                                             Human lymphotoxin synthetic gene alterated to leave only one restriction enzyme recognition site altered to leave only one restriction enzyme recognition site bischosure; Fig 1.13pp; Japanese.

It is the same anino acid sequence as natural HL. Its encoding gene is genetically engineered to make modifications of HL easier and improved lymphotoxins can be prepd.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Fig 2; Sepp; English.

The sequence deduced from CDNA derived from 3 overlapping clones, pRN3-1: pPRN4-2: Deposited as Arcc 678885, 67886, and pRN4-4: Deposited as Arcc 678885, 67886, and 67887 resp.) The clones were isolated from a cDNA library in the lambda Zap vector prepd. from mRNA obtd. from newborn rat hearts using rat brain II cDNA probe. The protein has diagnostic, therapeutic, and prognostic applications.
                                             03-AUG-1990 (first entry)
Human lymphotoxin (HL) encoded by new synthetic lymphotoxin gene
Human lymphotoxin (HL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ë
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New rat cardiac sodium channel proteins - and associated DNA

Tumoricidal polypeptide(s) - in which DNA to code the polypeptide(s) is constructed from human-derived TNF-coding DNA and rabbit-derived TNF-coding DNA.
                                                                                                                                                                                                                                                                                                                                 New DNA encoding rabbit tumour necrosis factor - useful in expression of the factor in Escherichia coli for anti:tumour use claim 2; Page 39; 64pp; English.

The rabbit TNF can be obtained in large amounts by recombinant DNA techniques. DNA encoding rabbit TNF is obtained by cultivation of rabbit macrophages with inducers. A fraction containing TNF mRNA is separated from the macrophages and used for the preparation of a cDNA library. The TNF may be used as an antiutmor agent. See also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            inducing necrosts of tunours and as antivirals of tunours of claim 1; Page 54; 65pp; English.

The TNEs of the invention are able to induce necrosis of tunours without toxic effects on the normal living body tissues. They are also antivirals. Dose is 50-100 x 1,000,000 units daily for an adult. The DNA is ligated to a replicable expression vehicle to give a recombinant DNA. This is used to transform a microorganism, transformants are selected and incubated to produce TNE. Specifically claimed are plasmids pTNF-lac-1 and pTHF-lacUV5-1 and identified and isolated after studies on rabbit TNF.

Producing modified tumour necrosis factor alpha - useful for regulating modified tumour necrosis factor channel activity e.g.

Increasing permeability

Increasing permeability

Increasing permeability

Increasing permeability

Increasing permeability

The sequence of rabbit TNF-alpha disclosed in DNA 5:157-165,

Increasing permeability

Increasing permeability

Increasing the sequence of the specification. A modified version of this substituted (see Features Table). The resulting TNF-alpha mutein has modified channel activity compared to wild-type.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New DNA encoding rabbit tumour necrosis factor - useful in expression of the factor in Escherichia coli for anti:tumour use claim 6; Page 39; 64pp; English.

The rabbit TNF can be obtained in large amounts by recombinant DNA rechiques. DNA encoding rabbit TNF is obtained by cultivation of rabbit macrophages with inducers. A fraction containing TNF mRNA is exparated from the macrophages and used for the preparation of a cbM library. The TNF may be used as an antiutmor agent. See also NSO196 and PSO138.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Disclosure; Table 2-2, Page 35; IO2pp; English.

The inventors claim a DNA having or contg a base sequence corresp.

The inventors claim a DNA having or contg. a base sequence of having or contg. a base sequence corresp. to an AA sequence of formula: (Met)p-(X)n-(B)m-A in which A- a polypeptide of formula (Ia) in which one or more AAs may be deleted or replaced by other AAs;

B- Ser-Ser-Arag in which 1-3 of the AA residues may be deleted or replaced by other AAs;

C alaimed is a DNA contg. a base sequence different from but having replaced by other AAs; to the AA sequence of formula [Ia] is shown by the sequence of the bases nos. 286-738 in Table 4

KNSOG6). The base sequence shown in NSOI64 corresponds to the base sequence from the 37th to 738th bases in NSOI65.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ï

DR WPI; 87-039562/06.

DR N-PSDB; N71312.

PT New polypeptide and a DNA coding it - has anti-tumour activity
PS Disclosure; Fig 2: 14pp; Japanese.

C Claimed sequence is procured from phenocritical plasmid pHTD362,

CC Constructed from plasmid pHTR91. The gene product has antitumour

CC Sec also N71311.

SQ sequence 235 AA;

Hueck, C.; Kraus, A.; Hillen, W.D.R.

Gene (1994) 143:147-148

Sequences of ccpA and two downstream Bacillus megaterium genes with homology to the motAB operon from Bacillus subtilis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            39 etierlgyrpnavarglaskktttvgvíípdísníf--yae-l-arg-ied-iatmyk-y 91

DANIEL R.A., ERRINGTON J.;
J. GEN. MICROBIOL. 139:361-370(1993).

J. GEN. MICROBIOL. 139:361-370(1993).

I. FUNCTION: MAY PLAY AN ESSENTIAL ROLE NOT ONLY DURING SPORULATION,
BUT ALSO DURING VEGETATIVE GROWTH.

I. SUBCELLICHAR LOCATION: INFERRAL MEMBRANE PROTEIN.

I. SIMILARITY: BELONGS TO THE FTSW/RODA/SPOVE FAMILY.

I. CAUTION: REF. 2 SEQUENCE DIFFERS FROM THAT SHOWN IN THE N-TERMINUS

AND IS SHORTER DUE TO A FRAMESHIFT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     53 agigviam-ffimnvdywt-wrtwskilm-vicffilvlvlipgvgmvrngsrswigvga 109

-! FUNCTION: THIS PROFERI MEDIATES THE VOLTAGE-DEPENDENT SODIUM ION

-! FUNCTION: THIS PROFERI FOR WELL ACCOMED OR CLOSED

CONFORMATIONS IN RESPONSE TO THE VOLTAGE DIFFERENCE ACROSS THE

MEMBRANE, THE PROTEIN FORMS A SODIUM-SELECTYCE CHANNEL THROUGH

WHICH NA+ IONS MAY PASS IN ACCORDANCE WITH THEIR ELECTROCHEMICAL

GRADIENT IT IS A TETRODOTOXIN-RESISTAMT NA+ CHANNEL SOFPOM.

-! NA+ CHANNELS IN MAMMALIAN CRADIACA MERRANE HAVE FUNCTIONAL

PROPERTIES OUITE DISTINCT FROM NA+ CHANNELS IN NERVE AND SKELETAL
